SUMMARY

The Dong Tam Base Camp of the 3rd Bgde, 9th Inf Div., located on the My Tho River approximately 40 miles south-southwest of Saigon, Vietnam, is in the middle of a large expansion operation. The site, personally selected by Gen William C. Westmoreland, Commander of U.S. Forces, in Viet Nam, is being constructed on a large field of rice paddies. Two dredges are working constantly sucking sand from the river bottom and depositing it around the perimeter of the camp. This process, used since the initial construction, is necessary to raise the camp above flood level during the rainy season. Construction began in Oct. 66 and the 3rd Bgde moved in and became operational on 7 Jan. 67. The camp, a supply and Hqs area, contains two infantry battalions, field hospital, a mobile water purification plant and various support units.

From 18-20 Feb. 1967, The 5th Battalion, 60th Mechanized Infantry, 9th Inf Division maintained a series of daylight reconnaissance patrols in the area surrounding their forward base camp at the Tan Hiep Airstrip approximately 10 miles north of the Dong Tam Base Camp.

On 18 Feb. 1967 elements of "C" Co. 5th Bn., 60th Inf. with an attached section from the battalion medical platoon inspected the condition of the bridge entering the village of Ap Tinh Thi and held a "MEDCAP" for the villagers.

On 19 and 20 Feb. 1967 "A" Co. 5th Bn., of the 60th Inf. conducted a reconnaissance patrol thru the southern tip of the Plain of Reeds area, approximately four miles northwest of the Tan Hiep Airstrip. The mission of the patrol was to test the maneuverability of their M-113 Armored Personnel Carriers in a swampy area. After nearly completing their mission the patrol became bogged down in a deep, swampy area. Forcing the men of "A" Co. to spend a wet, cold night and all of the following day freeing their vehicles from the muck.

This material should be considered for SPX-67-3

ROLL 1

1. IS. Two water purification trucks sitting along the My Tho River at Dong Tam base camp.
2. PAN From hose in river to mobile water purification unit mounted on a 2½ ton truck.
3. MS. Inside truck showing containers capable of purifying 3000 gal of water per hour
