1. Organizational Data

a. Subordinate Units

(1) Devastate Alpha - AN/TPQ-10 system #11 located at Chulai, RVN.

(2) Devastate Bravo - AN/TPQ-10 system #2 located on hill 225, Da Nang, RVN.

(3) Devastate Charlie - AN/TPQ-10 system #6 located at Phu Bai, RVN.

(4) Devastate Delta - AN/TPQ-10 system #14 located at Dong Ha, RVN.

(5) Landshark - DASC located at 3rd Marine Division Command Post,

Da Nang, RVN.

(6) Landshark Alpha - DASC located at 1st Marine Division Command

Post, Chu Lai, RVN.

(7) Landshark Charlie - DASC located at 4th Marine Regiment Command Post, Phu Bai, RVN.

b. Period Covered. 1 June through 30 June 1966.

2. Significant Events as They Occur Chronologically

- a. 2 June. Lt. E. J. KORENEK controlled his 1000th mission in Vietnam. He is the first strike controller to reach the 1000 mission mark.
- b. <u>6 June</u>. Major General ROBERTSHAW, the Commanding General First Marine Aircraft Wing, visited the Direct Air Support Center at Chu Lai.
- c. 11 June. Devastate "Bravo" completed the move from Marble Mountain Air Facility to hill 225 Da Nang.
- d. 12 June. Brigadier General ELWOOD, the Assistant Wing Commander, First Marine Aircraft Wing visited the ASRT at Da Nang.
- e. 18 June. Major General ROBERTSHAW, the Commanding General, First Marine Aircraft Wing was controlled by Devastate "A" on TPQ-10 mission and reported secondary explosions on target.

3. Statistical Data

d. Devastate "Alpha"

- (1) Controlled 273 A-4, 52 F-4, 27 F-8, 2 B57 on 337 missions.
- (2) Dropped 656 D-1, 56 D-2, 102 D-3, 11 D-4, 48 D-6, 481 D-12, 8 D-25 bombs.

e. Devastate "Bravo"

- (1) Controlled \$3 A-4, 23 F-4, 10 F-8, on 82 missions.
- (2) Dropped 287 D-1, 48 D-2, 14 D-3, 4 D-6, 127 D-12, 2 D-25 bombs.

f. Devastate "Charlie"

- (1) Controlled 102 A-4, 58 F-4, 31 F8 on 190 missions
- (2) Dropped 508 D-1, 106 D-2, 56 D-3, 65 D-6, 211 D-12, 8 D-13, 40 D-25 bombs.

g. Devastate BDelta"

- (1) Controlled 102 A-4, 41 F-4, 19 F-8 on 157 missions.
- (2) Dropped 362 D-1, 133 D-2, 42 D-3, 4 D-4, 18 D-6, 60 D-12 25 D-25 bombs.

4. Narrative Summary

a. Administration. The average overall strength of the squadron has decreased from last month, the results being as follows:

Officers - 50

Enlisted USMC - 230

Enlisted USN - 2

Two Staff NCO's were evacuated for medical reasons, both non-battle casualties. One CWO-2 was promoted to 2ndLt., one SSgt was promoted to CySgt, and one Pfc was meritoriously promoted to LCpl.

b. <u>Civil Affairs</u>. During the month MASS-2 continued to assist Head-quarters Battalion, 3d MAR DIV with its medical/civil affairs program by sending one corpsman out each Tuesday and Wednesday afternoon. Approximately 225 patients were treated at the villages of An Khe and Hoa Phat and at the Buddhist orphanage at Hoa Phat.

CONFIDENTIAL

CONFIDENTIAL

- c. Special Services. Special Services activities consisted of beach parties on eight separate occasions, nightly movies in the squadron C.P. area and continued use of the squadron book exchange library, weight lifting room, vollyball court and archery range. Special transportation was provided to off-duty personnel for a USO show at MAG-11.
- d. Operations and Training. The four Air Support Radar Teams and three Direct Air Support Centers functioned throughout the reporting period in support of all operations conducted by Marine units in III MAP. The Mobile DASC was not sent out this month.

An SOP for the Direct Air Support Center in Vietnam was published during June and is enclosed with this report as enclosure (1).

Since coming in country, the four ASRT's have controlled 6290 ordnance missions resulting in 7359.9 tons of explosives being dropped on targets in Vietnam. In conjuction with ASRT operations, the meteorological team at the Dong Ha ASRT site began operating this month and provides upper winds data for TPQ-10 operations.

The ASRT, Devastate "Bravo", was moved from the Marble Mountain Air Facility to a new site on hill 225 just south of the Communications area and radio hill at the Squadron C.P. This relocation of one of the four ASRT's has helped provide more efficient employment of 400 cycle power, maintenance personnel and test equipment. It has also added depth to the effective area of coverage of Devastate "Bravo".

1240 man hours of basic and local interest training were conducted during June. All sections reported having conducted technical training.

- e. <u>Ground Defense</u>. A squadron ground defense plan was promulgated this month. Construction of a command bunker was begun and is nearly complete. Assignments of all personnel to defense platoons have been made, and one drill held in conjuction with a HgBn, 3d MARDIV CPX was conducted.
- f. Supply and Services. The Supply support for the squadron has been satisfactory and improving. This is primarily due to reorganization within the section and extra effort on everyone's part. The shortage of 782 equipment has been alleviated. Adequate stock is on hand for future needs. The clothing account is satisfactory. Green shirts and shorts are now being issued. Jungle boots and jungle utilities are no longer rated by this organization.

The Motor Transport situation has been improving and the supply of spare parts to remove vehicles from deadline has improved.

An informal Wing investigation of the utilization and maintenance of generators showed only minor discrepencies in this unit. A lack of experienced generator personnel was mentioned in the critique.

CONFIDENT IAL

The Utilities section completed work on the new Devastate Bravo site, including the construction of one (1) 18'x48' strong-back tent and the laying of two cement slabs for the AN/TPQ-10.

The camp water system was completed and a new site for the camp generator was constructed during June.

- g. <u>Communications-Electronics</u>. The ^Communication-Electronics Standard Operating Procedure was published during June and is enclosed as enclosure (2).
- 5. Commanders Comments. The tempo of operation has increased somewhat this month as evidenced by the number of missions controlled by the DASC's. Of significant interest is the number of fixed wing missions controlled by Landsharks "A" and "C". The squadron is particularly proud of the total tonnage dropped under control of the four Air Support Radar Teams. It is expected that with an increase in the number of larger tactical operations, more information of historical value will be forthcoming.

E. JONES

SQUADRON ORDER 3000.3A

From: Commanding Officer
To: Distribution List

Subj: Standing Operating Procedure for the Direct Air Support Centers

(DASC)

Ref: (a) SqdnO 03000.4A

Encl: 1/2) Med-Evac Request Form

(2) Sparrow Hawk Request Form (3) Tactical Air Request Form (4) Helicopter Request Form (5) DASC RIO Log Sheet

- 1. Purpose. To familiarize squadron personnel with the concept and employment of the DASC as it is currently utilized in VietNam. This SOP minimizes formal tactical doctrine in an effort to concentrate on particular topics that are relevant to the present VietNam combat situation. This document is directed to and designed for air support control personnel who are familiar with the fundamentals of the Marine Corps Air Control System.
- 2. Cancellation. Squadron Order 3000.3
- 3. <u>Mission</u>. The mission of the DASC is to provide facilities for the control of air support aircraft and helicopters. In its present state of employment, the DASC is utilized to control helicopters in support of U.S. Marine and RVN operations in VietNam. In addition, it functions as the control agency for fixed wing aircraft in Direct Support of III MAF, subordinate to the TADC.
- 4. Specific Tasks. The DASC performs a variety of tasks and is flexible in changing to meet such varied operational commitments as the combat environment might produce. Current tasks include:
- a. Launch authority and coordination of medical evacuation (Med-Evac) missions.
- b. Launch authority and coordination of quick reaction troop helilifts, le., Sparrow Hawk.
- c. The receipt and coordination shipprophere digitary the missions to dispute the coordination of the coor

ENCLOSURE (/)

- d. RIO control and coordination of pre-planned aircraft missions as directed.
- e. The receipt, monitoring and dissemination of current and reliable. ABRT targeting information.
- f. The recipt and recording of all ASRT damage assessments and ord-nance expenditures.
 - g. The receipt and timely and accurate dissemination of flight hazards.

5. Special Instructions concerning assigned tasks

- a. Launch authority and coordination of medical evacuation missions. Medical evacuation missions are used for friendly or enemy KIA, WIA or ILL personnel. Requests are received by the DASC over radio, land line or other expeditious means. The requesting unit will establish priority of action and pass all pertinent information following the format shown in enclosure (1). Med-Evacs are classified as "routine" for ill patients and minor wounds, "priority for serious ill or wounded, and "emergency" for life or death cases. Upon receipt of the Med Evac requests, the DASC will:
 - (1) Assign a Med-Evac mission number to the request
 - (2) Ensure completeness and accuracy of the submitted request.
- (3) Plot pick-up coordinates on the situation map to determine radial and distance to nearest navigational aid (TACAN).
- (4) Evaluate pick-up area and approach/retirement routes for potential flight hazards (artillery fire, enemy ground fire, etc.).
- (5) Coordinate with FSCC in all cases when supporting arms constitute a flight hazard.
- (6) Pass the Med-Evac request vialland line or radio to the designated helicopter unit.
 - (7) Notify the requesting unit of the status of the mission
- (8) Upon pick-up of the casualty, notify appropriate medical unit concerning inbound patient.
- (9) Upon receipt of two or more simultaneous Med-Evac requests, or additional requests while a Med-Evac mission is in progress, the DASC will determine, based on request priority and pick-up location, the most effective means of using available aircraft. This action may involve diverting any available aircraft or launching additional aircraft.
- b. Launch authority and coordination of quick reaction troop heli-lifts. Combat experience in VietNam has frequently shown the need for the capability to move troops on a quick reaction basis to exploit or support varied

tactical situations. Currently, this requirement is filled by the Sparrow Hawk operation. This mission consists of one reinforced Marine rifle squad transported by CH346 aircraft escorted by two armed UHLE aircraft. Requests for the employment of the Sparrow Hawk squad are received by the DASC over radio, land line or other expeditious means. Upon receipt of a Sparrow Hawk request, the DASC will:

- (1) Assign a Sparrow Hawk mission number to the request
- (2) Ensure completeness and accuracy of the submitted request in accordance with the format shown in enclosure (2).
- (3) Plot pick-up and destination coordinates on the situation map to determine radial and distance to the nearest navigational aid.
- (4) Evaluate pick-up, and destination area plus approach/retirement routes for potential flight hazards.
- (5) Coordinates with FSCC in all cases where supporting arms consitute a flight hazard.
- (6) Pass the Sparrow Hawk requests via land line or radio to the designated helicopter unit.
- c. The receipt and coordination with TADC of on-call aircraft requests. On-call aircraft missions are those missions which are not scheduled for specific times. Aircraft used in these missions are in a ground alert (scramble) status, airborne alert status or may be diverted from current missions. They may be either fixed wing or helicopter and can be requested from any source. Current launch authority regulations dictate that all on-call aircraft missions, with the exception of Sparrow Hawk and Med-Evacs, be processed through the TADC. Upon receipt of an on-call tatical air request (TAR) or helicopter request (HR), the DASC will:
 - (1) Assign a mission number and request number to the TAR or HR.
- (2) Ensure completeness and a curacy of the submitted TAR or HR, in accordance with the format shown in enclosures (3) and (4).
- (3) In the case of a HR, plot the pickup and/or destination coordinates, if applicable, on the situation map to determine radial and distance to the nearest navigational air. In the case of a TAR, plot the general area, if applicable, to determine its position relative to the nearest navigational aid.
- (4) Evaluate operating areas of both HR's and TAR's for potential flight hazards.
- (5) Coordinate with FSCC in all cases where supporting arms constitute a flight hazard.
- (6) Notify the TADS of the TAR and request launch. In the case of HR's contact the 1st MAW Helicopter Scheduling Officer through the TADS and request permission to launch.

~

- (7) When permission is received from the Helicopter Scheduling Officer to launch, relay the approved mission request to the designated helicopter unit for action.
- (8) In the case of airborne diverts or utilization or airborne alert aircraft, coordinate with the TADC. This action normally requires a high degree of flexibility and tight control. This flexibility must include the ability to switch m des of communication, i.e., UHF to FM on short notice to facilitate aircraft hand-offs and/or marriages as the situation requires.
 - (9) Notify the requesting unit of the status of the mission.
- d. RIO control and coordination of preplanned aircraft missions as directed. Pre-planned aircraft missions are those missions which are scheduled for specific times. They may utilize either fixed wing aircraft or helicopters. The DASC hardles all helicopter RIO Traffic and receives fixed wing RIO's, on those missions working directly through or with the DASC or ASRT's. Fixed wing RIO's received by the DASC normally are originated by helicopter escort aircraft, landing zone preparation strike aircraft and those haunched for AN/TPQ-10 control. Close air support aircraft will RIO when the DASC is designated the coordinating agency in handing them off to a TAC(A) or FAC for control. Upon receipt of an aircraft RIO, the DASC will:
- (1) Record all pertinent information provided by the aircraft in the DASC RIO log sheet, enclosure (5).
- (2) Enter all pertinent information concerning the mission on the fixed wing or helicopter status board.
- (3) Monitor the status of all current missions. All cases where aircraft are overdue for either launch or return will be checked immediately with the TADC.
- e. The receipt, monitoring and dissemination of current and reliable ASRT targeting information. A major responsibility of the DASC is to relay timely and accurate target information to its subordinate ASRT's. This information is always received from the FSCC and is passed to the designated ASRT via the most expeditious means. Due to the complex nature of the current ASRT targeting procedures, detailed instructions are covered under separate instruction, reference (a).
- f. The receipt and recording of all ASRT damage assessments and ordnance expenditures. Accurate TPQ-10 damage assessments and ordnance expenditure information are maintained by the DASC. This information is received from each of the ASRT's during every 24 hour period of operations and documented in the "TPQ-10 targets Hit Logbook". This record may be used to provide current target damage status to the FSCC and operational data to the Squadron S-3.
- g. The receipt and timely and accurate dissemination 66 flights hazar's. A collateral responsibility of air support control is the

monitoring and dissemination of accurate flight hazard information. A flight hazard is defined as a source of interference with friendly aircraft operations. Flight hazards may be originated by friendly forces as in the case of artillery, naval gunfire and conflicting air traffic; they may also be originated by the enemy as in the case of hostile ground fire. Friendly artillery and naval gunfire information is provided by the FSCC and indicated on the situation map for dissemination to other aircraft, when applicable. Conflicting air traffic information is normally obtained from within the DASC and similarly relayed to aircraft, when applicable. Enemy gunfire reports are nearly always obtained from airborne aircraft and, when of a scrious nature, recorded and plotted on the situation map for dissemination to other aircraft. Ground fire from weapons of .50 caliber or larger is considered to be of a serious nature. The estimated location of enemy gun positions is given to the FSCC as a possible target for supporting arms.

- 4. <u>Configuration and supporting equipment</u>. Due to the variety of air support control operations performed by the DASC, design flexibility and supporting equipment reliability are mandatory. The DASC can be employed in any of four possible configurations.
- a. Permanent, fixed installation DASC. The DASC within each TAÉR is deployed in a fixed installation. Permanent or semi-permanent enclosures are used to shelter complete AN/TSQ-6 components. This DASC is normally adjacent to the senior FSCC of the TAOR, and is equipped to operate 24 hours a day on an indefinite basis. Communications capabilities normally include 2-4 HF radios, 4-6 UHF radios, land lines to adjacent units and miscellaneous communications support equipment. Operating power is provided by heavy duty trailer mounted generators. The following radio nets are manned in the fixed DASC:
 - (1) Tactical Air Request (TAR) HF or FM
 - (2) Tactical Air Command (TAC) HF
 - (3) Tactical Air Traffic Control (TATC) UHF or FM for helicopters
 - (4) Tactical Air Direction (TAD) UHF
 - (5) Helicopter Direction (HD) UHF or FM
- b. Mobile DASC (heavy). Offensive operations of battalion size or larger conducted outside the TAOR are frequently supported by a mobile DASC. For operating periods of more than 10 days, the mobile DASC (heavy) configuration is employed. Tents are used to shelter major AN/TSQ-5/6 combonents. This DASC is normally adjacent to the operational FSCC and is equipped to operate in the field 24 hours a day for approximately 45 days. Communications capability is essentially the same as that of the permanent DASC, but with considerably less communication support and repair equipment. Operating power is provided by heavy-duty trailer mounted gaugnators. Because of its relatively small size and mobility, this

DASC can be displaced rapidly. The same number of radio nets are operated in the mobile DASC (heavy) as are manned in the permanent DASC.

- c. Mobile DASC (light). The mobile DASC (light) is employed to support operations outside the TAOR that are of less than 10 days duration. A single tent is utilized to shelter the operating area which is adjacent to the FSCC. Communications capability is limited due to the lack of heavy duty generators and support equipment. Radio equipment is normally vehicle mounted and powered from the vehicle; ground mounted radios are battery powered. Internal DASC equipment is limited to a table, chairs and portable map board. Because of its small size and high mobility, this DASC can be displaced and set up rapidly; it also helicopter transportable. The same number of radio nets are operated in the mobile DASC (light) as are manned in the permanent DASC, but without backup capability.
- d. Airborne DASC. The airborne DASC is utilized as an interim air support control agency during the deployment and retraction of the mobile DASC on a field operation. This DASC is situated within a specially configured KC 130F aircraft and has the capability of operating over a wide area. Normal operating flights last from 6-8 hours, however, this time can be extended after refueling. Communications and support equipment are provided by the aircraft, but are manned by MASS-2 personnel. The airborne DASC normally employes the same number of operating nets as are manned in the other DASC's.

DECLASSIFIED

5.3

MARINE AIR SUPPORT SQUADRON 2
Marine Wing Headquarters Group 1
1st Marine Aircraft Wing, FMF, Pacific
FPO San Francisco 96602

10/JWA/dlh 2000 6 June 1966

From: Commanding Officer

To: Dist. List

Subj: Communications Electronics Standard Operating Procedure (Comm Elect SOP)

Eucl: $\sqrt{(1)}$ Radio operations and maintenance, to include the Squadron Liaison

 $\sqrt{(2)}$ Switch board, Telephone and Wire section.

(3) Comm Elect Motor Transport.

M4) Comm Elect Generators.

I(5) GCBS Maintenance. (AN/TPQ-10)

(6) Ready Issue Supply.

- 1. <u>Purpose:</u> This instruction combines those Comm Elect functions which are of such routine nature as lends themselves to uniform standardization to facilitate accuracy, simplicity, and enhance squadron Comm Elect operations. This instruction will smooth out changes in Comm Elect personnel.
- 2. <u>Background:</u> The mission of the MASS Squadron requires dependable communications. The mission of the Comm Elect section is to provide the essential communications support. Requests for assistance from the DASC take priority over all Comm Elect functions in the Squadron. It is directed that action toward restoring DASC operational capability be taken with minimum delay.
 - 3. Action: This SOP is effective immediately, and will apply to all Comm Elect operations until altered or superceded by appropriate authority. Due to the separation between Squadron headquarters and sub units, each sub unit must prepare its own SOP. Suggestions for improvement in the SOP are solicited.

E. M. JONES

Dist. List: 1st MAW (CEO) (1)

MWHG-1 (CEO) (1)

S-1 (1)

S-3 (1)

Comm Elect (3)

Each ASRT (1)

Each DASC (1)

ANCT OSURB (2)

SOP for Radio operations, maintenance and operation of the Squadron Liaison net.

NCOIC Duties:

- 1. Assure that appropriate Technical Manuals provide guidance for installation and operation of all radio equipment.
- 2. Assure compliance with the guidance provided in TI 4700 15/1 for maintenance of equipement and records on equipement. Use Preventive Maintenance (PM) sheet NAVMC 10559—SD for PM guidance and maintenance of appropriate records.
- 3. Assure that required special and technical instructions are on hand, up to date, and readily available for reference.
- 4. Prepare and supervise the proper keeping of log books on such equipment as required by Para. 8C TI 4700 15/1.
- 5. Establish and supervise timely reviews of spare parts on requisition to assure appropriate follow up action.
- 6. Assure that Electronic Failure Reports (EFRs) are submitted in accordance with TI 2005 15/1.
- 7. Establish and supervise a full time watch which will assure that qualified assistance is readily available to assist when problems arise. Assure that all radios are functioning at the beginning of each watch.
- 8. Supervise the operations of the Squadron Liaison Net. Assure that operators perform properly. Assure that appropriate logs are maintained.
- 9. Assure that all traffic over the Squadron Liaison Net which is of a priority nature or higher and requisitions which involve priority 02 or higher are taken to appropriate persons for immediate action.
- 10. Assure that incoming and outgoing traffic is diseminated to the proper sections or persinnel. Assure maintenance of appropriate logs and files for this function.
- 11. Keep the Comm Elect Officer informed of any problem areas or matters of possible interest to Comm Elect functions.

Encl. (1) Page 1

ENCLOSURB (2)

SOP for operations, Wire Section

The Wire Chief will:

- 1. Supervise the maintenance of all C.P. wiring and cross connecting cables.
- 2. Set up the watch for the switch board, supervise operators to assume proper performance. Assure that each operator knows the names of Flag Officer personnel in the immediate area and how to get in contact with them.
- 3. Report abusive telephone users to the Comm Elect Officer.
- 4. Check out all DASC lines prior to 0800 daily. Cooperate with adjacent wire sections, follow up trouble calls to assure satisfactory solutin.
- 5. Supervise preventive maintenance on all wire equipment, maintain appropriate records.
- 6. Assure that qualified persons are available to render immediate assistance when wire problems arise.
- 7. Keep the CEO informed of all matters of interest or which require his actions.

Encl: (2) Page 1

SOP Comm Elect Motor Transport

The NCOIC will:

- 1. Supervise the proper operations and maintenance of M.T. equipment to include proper maintenance record keeping.
- 2. Assure that vehicles leaving the area have been appropriately dispached.
- 3. Assure that before operation, during operation, and after operations check lists are followed.
- 4. Assure all maintenance is properly performed. Refer vehicles to MT section when their assistance is required.
- 5. Keep the CEO informed of all matters of possible interest or that require his action.

Encl. (3) Page 1

The NCOIC will:

- 1. Assure that generators function properly. That appropriate before, during, and after operations checks are made.
- 2. Assure that proper maintenance is performed and appropriate records maintained.
- 3. Arrange for fuel and oil deliveries, as well as other maintenance items.
- 4. When operating with no back-up generator, coordinate with the DASC to determine a time that the generator can be shut down for maintenance so as to have minimal effect on operations. Every generator must be shut down and checked once during during a 24 hour operating period.
- 5. Assure that fire extinguishers are on hand and functional in generator areas.
- 6. Keep the Comm Elect Officer informed on all matters of possible interest and on those which require his action.

Encl. (4) Page 1

SOP or TPQ-10 Maintenance

Ref: (A) MCO 4400.40A

(B) Supply Support Contract NOM 73281, General Electric Co.

Appen: 1(1) Maintenance Float

(Appendicies are not included in

SOP's for most recipients).

(2) Insurance Items
(3) Electric Drive Spares

(4) 30 Day Stock

1. Scope. This Squadron rates 4th echelon maintenance on aviation peculiar equipement and radars, and 2nd echelon on ground-common equipement.

Fourth echelon is rated on the AN/TPQ-10 and its component equipement (ARC-52, ARW-66, KY-51 and USM-154) and second echelon is rated on all T/E test equipement. The only test equipement which is a component of the AN/TPQ-10 is the USM-154. All else is T/E test equipement.

As a practical working guideline, if the required parts, tools, and knowledge are available to accomplish the repair of a failed item, do it.

2. Maintenance Float. The maintenance Float consists of the sub-assemblies listed in Lapplen(1). These are custodial items and will be sent to ASRT's in exchange for the like bad sub-assembly. The CEO is the responsible Officer for the maintenance float with selected items on sub custody to ASRT OIC's.

A. ASRT: Sub-custody ecords are maintained in all float items signed for by the OIC.

B. GRM-38/48: Custody records are kept on all float items signed for by the CEO. In addition, file cards are kept which give location and turn-around data. Repair is accomplished in the GRM-38 whenever possible. If required repair is beyond the capability of the GRM-38, the item is returned to General Electric under the support contract, described later. If repair is not feasible, or the item is lost, a survey letter must be written and an investigation held and approved in order to drop the item from our accounts.

- 3. Insurance Items. These are low usage parts required for extended AN/TPQ-10 operation. They are replaced on a one-for-one re-order basis and stock levels are not subjected to usage data. These parts are held in the GHM-48 van and are listed in appen. (2). File cards are kept showing location, on-hand quantity, and on-order quantity with requisition numbers.
- 4. Electric Drive Spares. These are broken down into two categories: (A) unit spares, located at the ASRT's, and (B) squadron spares, held in the GRM-48 van. Parts are replaced on a one-for-one re-order basis. Whenever possible, circuit boards are repaired in the GRM-38. When repair cannot be accomplishednin the GRM-38, a replacement board is ordered. Repair under the support contract is impractical due to shipping and inspection requirements.
- 5. 30 Day Stock. Each ASRT has been issued a 30-day parts box as listed in appen (4): A one-for-one re-order basis is used.
- 6. G.F.E. and Test Equipment. Government furnished equipment (AkC-52, ARW-66 & KY-51) and test equipment are repaired at the ASKT site whenever possible. When local repair is not possible, the failed item is returned to the GRM-38 for repair. ARC-52 repair is sometimes available at a MAC (Helicopter) near the ASKT. In the GRM-38, Maint. and Mod. cards as well as file cards are kept on all Squadron test equipement, radio as well as radar. The file cards show location, calibration status, and authorization to hold each piece of test equipment. Duplicate Maint. and Mod. cards are also in each piece of test equipement and in G.F.E. equipement. Calibration is coordinated between the ASRTs and the GRM-38 and is accomplished at the most convenient location.

Encl. (5) Page 1

7. Requisitions

a. Required parts are ordered by message from the ASRT to the GRM-38/48 utilizing the following format.

> FM DEVC 49 TO DEV 49

BT

REQ. C3-21B

- 1. END ITEM
- 2. ECHELON OF MAINTENANCE
- 3. FSN
- 4. PAGE AND VOLUME (SI-4)
- 5. ITEM NUMBER (SL-4)
- 6. QUANTITY
- 7. PRIORITY 8. REWARKS (IF REQUIRED)

The requisition number consists of the team designator, month, date, and the requisition number for that day. C3-21B indicates the second (B) requisition from team "Charlie" on 21 Mar. A4-1A indicates the first requisition from "Alpha" on 1 April. The Squadron Command Net is used to pass requisition

- b. When a requisition is received at the GRIA-38/48, supply's Comm-Elect issue point (1), insurance stock (2), maintenance float (for next higher subassembly) (3) are checked in that order. If the part is not available from these sources, it is requisitioned on a DD1150 from the Comm-Elect Office. Insurance stock and maintenance float are issued only on priority 05 and 02 requisitions.
- c. Replacement items for insurance stock and repair parts for maintenance float items are ordered priority 05. Replacement items for 30-day stock boxes are ordered priority 12. For the equipement, priority 05 is used when operational capability or flexibility is reduced (such as loss of automatic control of A/C) and priority 02 is used when the equipement is off the air or when the mission cannot be accomplished (such as loss of beacon capability).
- d. Received parts are hand-carried to the ASRT, normally by a courier from the GRW-38/48.
- e. A requisition recap, or list of outstanding requisitions, is sent to each ASRT twice monthly. A reply from the ASRT is sent reordering any shortages (of the recap) and cancelling any over-ages or filled requisitions.
- f. Separate requisitions logs are kept in the GRM-48 for each ASRT and for the GRM-38. These logs are reconciled with the Comm Elect requisition log at least once monthly.
- g. The Comm Elect issue point is checked weekly for items outstanding in the requisition logs. Parts sometimes come in for stock while there are requisitions out for the same parts.

8. Maintenance Records.

- a. ASRT. The records kept at each ASRT are 1) maintenance log, 2) EFR file, 3) Maint. and Mod. cards, 4) requisition log, and 5) parts inventories. Since most of the equipment is operated and maintained by the same people, PM sheets have no application here. All PM should be intered in the End-Item maintenance log, I.E. 7 Jan, TV-7, weekly PM. EFRs are kept for one year. Failed parts are entered on EFR cards and replaced parts are entered on Maint. and Mod. cards and in the maintenance log. No EFRs are submitted for a maintenance float replacement.
- b. GRM-38/48. EFRs are submitted on all parts replaced in the GRM-38. This applies to maintenance float, electric drive boards, ARW-66, ARC-52, and test equipement repairs. Entries are made on the Maint. and Mod. cards

TOSURB (2)

for the ARW-66, ARC-52, and test equipement. Work orders are kept on all repair work done in the GRM-38. These provide a record of failure rate and down time awaiting parts. Files are kept on all requisition messages (Squadron Command Net), Marine Corps messages, inspections, correspondence, and any other pending projects.

9. Contract Support. Supply and repair support are provided by the support contract of Ref. (B) and is administered in accordance with Ref. (A). For return of an item, 4 copies of DD-1149 are prepared. One is packed with the item, one is sent to Commanding General (P824), 1100 S. Broad Street, Phila. Pa. 19146, one is sent to Commandant of the Marine Gorps (Code CSI-3), Headquarters, USMC, Washington, D.C. 20025, and one copy is retained. All 3 copies sent should be signed. Packages and involuces are mailed by Government Paid Postage.

10. Required Reports. The only required report at the time of this writing is a speedletter to MCSA Phila. (Copy to MWHG-1, 1st MAW, and FMFPAC) whenever an electric drive failure occurs describing failed part, date, system, and cause. This is submitted by the GRM-38/48.

SOP for Comm Elect Supply

- 1. Requests for parts are made by Federal Stock Number (FSN) using an Electronic Failure Report (EER), a radio message, or by verbal means.
- 2. The C&E supply man takes any or all 4 of the following actions when he becomes aware that a requirement exists.
 - a. Check the location card file for the FSN.
- b. Draw item(s) from location given on the location card. Make entry on locator card to reflect new quantity.
- c. Should there be no card for this FSN, use the SL-7-1 cross reference list, then repeat actions a and b. Should FSN not be found no cross reference exists.
- d. All items drawn from supply must be entered on the check out sheet. The check out sheet must be turned into Squadron supply daily, this is done by placing it in the Guard Mail box in the CEO office.
- 3. All incoming gear from Squadron Supply for Comm Elect supply is either for stock, or it has a Comm Elect (C&E) number on it. The C&E numbered items, items which fill message requests, and items drawn for sub units, are proceeded by the CEO office and forwarded to the sub units.
- e. Should Comm Supply not have the item the CEO office is notified and submits a DD1150.
- 4. Stock items are stored as they fit inho mount out boxes, boxes are numbered and this number recorded on locator cards. The items are located in this fashion: Bulk items, numbered 130-x, 131-x and 130-1ax are located in the Comm storage GP tent on pallets.
- 5. The turn in of recoverable items is directly from using section to Squadron Supply under the cognizance of the CEO.
