F4 was being turned up by a pilot for a maintenance check. The starboard engine started normally, but the pilot failed to switch from external power prior to starting the port engine. As the port engine reached idle, the starboard engine went to CRT. Pilot shut down both engines with the throttles and turned both engine master switches off; however, he did not switch to internal power and electrical power was lost when the aircraft jumped the chocks and pulled away from the external power unit. Starboard engine stayed at CRT until the aircraft came to rest.

The aircraft sustained major damage.

b. Incidents, No Injuries, Limited Damage.

Aircraft was on the fourth 10 degree napalm run, when the pilot had target fixation and made a low pull out. Aircraft struck trees in the target area.

On take off pilot noted fire warning light on port engine, with no other indications. Pilot throttled back to 80% and the light went out. Aircraft returned immediately to base and no further indications noted. Post flight inspection revealed one broken and numerous bent 3rd stage turbine rotor blades.

On a normal landing, bolt nose strut knee, P/N 32-45069-5, sheared allowing nose strut piston to spin in cylinder nose strut outer. Pilot brought the aircraft to a halt without mishap. Slight damage was found on arm and bushing assembly, nose strut torque, upper and lower, and lower starboard corner of door assembly, nose landing gear forward.

c. Direct Enemy Action Hit Incidents, Limited Damage, No Injuries.

33-68I, F4B, 149453, Classified, 30 degree dive attack; minimum altitude 3500 above ground level 500 KCAS, ten runs made by division. The aircraft received ECHO damage when a .50 cal. round struck the right stabilator.

35-68, F4B, 150416, XD 798364, 20 degree snakeye attack, minimum altitude 1000 feet above ground level, 450 KCAS, five runs made on two separate targets in close proximity, ECHO damage ten inch hole in left outboard leading edge flap. .30 cal. hits in radome and both external wing tanks.

36-68I, F4B, 150419, XD 798364, 20 degree napalm attack, minimum altitude 1000 feet above ground level, 400 KCAS. On the first run the aircraft received ECHO damage. Napalm on the port wing station detonated on aircraft, the port LAU-17 separated from aircraft. Fourteen inch dent in left inboard leading edge flap, twelve inch tear in port aileron.

37-68I, F4B, 150643, XD 856417, 10 degree snakeye run, 1000 feet above ground level, 450 KCAS when hit on fourth run the aircraft received ECHO damage, one (1) .30 cal. round struck left windscreen, one grazed pilots canopy.

38-68I, F4B, 148377, 180/10 DaNang. 10 degree napalm run minimum altitude 400 feet above ground level, 400 KCAS, one (1) .30 cal. round entered door 22, severed pneumatic line, and lodged in right wing BLC duct.

## 7. Logistics

### a. MARCH Aircraft Maintenance Logistics Summary Report (LOGSUM)

#### (1) Aircraft Status:

a. Of 12.8 F4B's on hand 25.7% NORM rate is due primarily to the following reasons:

BUNO 148378 Down during month for repair of stabilator.  
 150412 Down during month for Hydraulic Drive Compressor change.  
 150416 Down during month for Hydraulic Drive Compressor change.  
 149467 Down during month for Hydraulic Drive Compressor change.  
 149447 Down during month for Hydraulic Drive Compressor change.

b. Item most frequently cannibalized during March was the Hydraulic Drive Compressor. The reason this item failed and had to be cannibalized was determined to be over working of the compressor.

c. New preflight procedures by the plane captain and deletion of the rat check on turn up by the pilot seemed to have relieved this overworked condition.

d. The rat is now checked on preflight by the plane captain and pneumatic system recharged before the A/C is started.
