

Dear, . 3 Apr

Another day & yet no letter. Am hardly depressed, however. First, it's been a good day - feel rested, relaxed, & more on top of my work. Second, got a beautiful letter from Vera that did me a world of good. And since she mentioned your good health and going to think-ins with the girl, I knew you were fine, busy, and getting involved in the big push (that which concerns me most, right now). Third, I realize the APO mailing system is screwy & I'll surely soon get letters from you. One guy for some weird reason got no wifely letters for 11 days & they got 16 from the huge backlog. Anyway, it's too good a day to be depressed and I always get to write anyway.

I'm sure you'll know
about my words to Vera
so I won't repeat. But
do have a thought. Putting
aside what I said earlier
about her personality, I
remember how much we
changed post-meeting.
Finding another in deep
love can do much to
round off rough edges &
develop the pluses in
a personality. I think
Vera is on the right
track & even if events
won't let relationships
with Ken become "the
thing", it still should
have definite good effects
on molding Vera's life.
I really do respect her
drive and devotion to
her goals and think she's
a great person just now
realizing her potentials
mentally & emotionally.
I'm glad we're friends
& I really enjoyed her

sharing of her thoughts.
We have alot of priceless
relationships + I'm glad
I can share them even
at this distance. Her
letter really brightened
the day, as yours will
even more tomorrow.

Am planning a trip into
the BX sometime next
week. Will send \$1000 then
by money order and hopefully
find a camera. It has
been just perfect weather
wise here, and the mountains
are beautiful both days out.
The movie last nite was
extremely good. We had
alot of trouble with the
film. It's been shown
so much, it was a bit
jumpy. But it really
expressed a man's love
of others + his profession.
It also was a good
example that that love
can be communicated to

Others (his class) until finally they understand it + understand themselves better. It's point was that the magic of reaching kids lies not so much in scientific judgement as to approach + motivation in the classroom. Rather it's the underlying strength, courage, + devotion of the teacher - love for his subject, subjects, and goals that provide the magic touch. The movie maybe over-did his magic touch on the class, but not too much so. It's not that one can reach everyone, it's the handful that one can "get to" through a life-time of work that makes it all worth it. Anyway, I really enjoyed the movie + hope you can get it on a re-run

or eventually TV someday.
You know, honey, there
are a lot of great people
in this world. As I get
to know this crowd a
little better, I'm getting
more & more proud of
our generation. Altho I'm
not ~~around~~ around the
dumb-dumbs much
(except for showers or crap),
when they check me
sometimes in discussing
various things from love to
life to home to politics. Even
they (after digging thru
swear words & dirty jokes)
have surprising insights
on things. I'm not flax
waver, but I'm glad to
be an Am. and part of
this generation of Americans.
They're definitely for the
most part ~~more~~
than their parents &
infinitely more respectful.

of each other's views &
thoughts & deeds (at the
not as considerate of
the last generation).
What I like to see most
is a big distrust of the
military establishment.
It's not a hatred, but
a definite questioning of
methods & raison d'être.
I'm glad to see that.

Heard today that it
is possible for me to
apply for a for a course
of guidance course with
the Army ed. ~~office~~ office
for computer training.
It covers how to set
up problems & run various
machines. And although
there's obviously not
practical practice or
machines, the knowledge
of how it's done would
be very valuable, as
a matter of fact, if
I could learn in

general how to set up
statistical problems &
read them, it might
be relatively easy to
pick up the special
characteristics of a
particular computer
later. Most businesses
have special computers
anyway & learning how
to operate one kind
may not be the one I
would have to use on
the job anyway. So,
in about a month or
so I'll try it. What do
you think? I think it
sounds interesting &
rewarding & God knows
I'll have the time.

Will get to learn to
run the computer here
next week. It's a very
specialized one used to
take consideration weather
conditions to get data
to fire the guns. But

it will still be fun & useful.

Hey, lover, I love you. Do hope you're moving smoothly toward comps. I think of it all the time. I know we can do well and will at least do our best. And even if a crisis comes, there's always so much gained from the experiences that at present, many opportunities for the future. We've been so lucky & I'm confident of you & your abilities. I'll be there as I've been all thru this time of preparation. You my Glenna & I'm so proud to be your husband I could bust.

Well, best draw this to a close & clean my rifle. Silly, I can find more to write for a

day when zero really
happens. Anyway I
especially enjoy sharing
these good days with
you. Until tomorrow,
Comme toujours,

je t'aime,
Lynn
D
