NOTE: THIS JOB WAS SHOT IN THE DELTA-REGION AND DUE TO HEAVY RAINS AND RIVER CROSSINGS THIS FILM WAS DAMAGED (WET).

MIS-SLATED DCS 200-83C/67VN, SHOULD BE- DCS 200-84C/67VN

DURING MY MOVEMENTS, THE CAPTION BOOK WAS LOST.

SUMMARY

On 22 JUN 67-in Long An Province, Co "A", 5th Bn (MECH), 60th Inf, 3rd Bde, 9th Inf Div, participated in a Search and Destroy Mission, "Operation Enterprize".

A Convoy of Armored Personnel Carrier's, M-113's, formed in the city of Tan An. The Inf mounted the APC's and moved out, East on Highway # 4. Reaching Highway 3 231, they moved South to their objective, a Search for a Re-enforced Viet-Cong Inf Bn reported operating in this area by Military Intelligence Channels.

Before reaching their objective the APC's ran into heavily mudded areas which prevented further movement until the APC's coming up from the rear, could reach them and pull them free. Once freed, they proceeded to their objective.

At their objective, approx. 8 km. Southeast of Ban Luc, the APC's moved into a Defense Perimeter Position. The Inf dismounted and after a briefing, the men began a 2000 km. sweep, conducted on the East bank of the Van Co Dong River.

1st/Lt Raymond Massieu (Oldsmar, Florida) C.O. Co "A", moved his unit through the Mangrov swamps, keeping in close contact with his platoons, by radio.

The terrain encountered was swampy areas consisting of flooded rice fields and mangrov swamps. At this time of the season, this area of the Mekong Delta Region has frequent rain storms. Along with the climate conditions, the men kept a steady advance stopping to help one another across river swamps.

Although not coming in contact with the enemy, the men found areas that showed evidence of recent Viet-Cong occupation. After a thorough search the men destroyed the bunkers, used for shelter, then proceeded with their sweep of the area.

DATE SHOT: 22 JUN 67

LOCATION: VIET-NAM

DATE SCREENED: 19 JUL 67

PHOTOGRAPHER: ABBOTT

REMARKS:

Negligible water damage, visible primarily at end of rolls. Abbott had some lost loop problems possible caused by climatic conditions. Excellent sequence on APC's in mud. Big improvement over last footage from Abbott.
