#### RABIES

Rabies is an acute deadly virus transmitted in the saliva of a rabid animal. Everywhere we go in Vietnam, we find dogs, monkeys and an assortment of other animals which could be infected with rabies.

Rabies in man is always fatal if not treated by medically trained personnel. A series of 14-21 shots are needed for the cure of rabies.

We cannot completely eliminate the carriers of rabies. However, we can avoid the disease. Animals can be immunized for rabies. Stay away from stray animals and report any suspected case of rabies for medical treatment immediately.

#### WAR TROPHIES

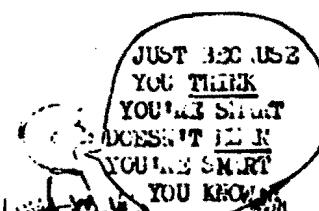

Everybody in Vietnam is interested in war trophies, especially if the trophies are firearms picked up in the field. However, sawed-off shot guns, rifles with barrels less than 16 inches, zip guns, automatic weapons, silencers, along with tanks, APCs and aircraft may NOT be taken home.

If you are found to be the holder of explosives or any other prohibited articles, you won't be leaving Vietnam. You may be sent back to your old unit and await disciplinary action, if the violation is serious enough.

Contact your provost marshal adjutant general sections for more information about sending home your trophies.
