air sanitizer

THE NO. 500 'PERSONAL SIZE' OZIUM DISPENSER

Quickly removes smoke and reduces airborne bacteria. Ozium imparts a light fragrance, as indicator of sanitizing action—leaves no after-odor.

Fully guaranteed to provide 500 individual measured concentrated Ozium sanitizing sprays.

Ozium is recommended for use in sanitizing and freshening the air.

THE SCIENCE OF AIR SANITATION

Q: What effect has OZIUM glycolized spray on airborne bacteria?

A: Germs need moisture to live and propagate. OZIUM (high pressure) spray coats airborne micro organisms with a hygroscopic glycol film, interferes with their metabolism, blocks their growth.

Q: How long will the OZIUM spray remain effective in the air?

A: This depends on varying conditions, such as drafts, temperature, humidity and traffic, but tests indicate that OZIUM glycolized spray will remain effective as long as two or three hours after one spraying. Bacteriological tests made at a very large industrial plant show that bacteria count was reduced by 80% two hours after OZIUM spraying. Eight tests were conducted during this two-hour period (copy of verifying letter mailed on request).

Q: Has OZIUM itself any odor?

A: Yes, a light, fresh fragrance is added to the triethylene-propylene formula as an indicator. The fragrance quickly fades while the glycol spray continues its effective work. No annoying after-odors are encountered.

Q: Has OZIUM any value in holding down bacteria-laden dust and lint?

A: Yes. The glycolized hygroscopic spray literally sweeps the air and will even help remove eye-smarting tobacco smoke.

Q: Will OZIUM help our sanitizing program?

A: Yes, but it should be used in conjunction with a thorough sanitizing plan including surface-cleaning germicidal detergents and soaps.

Q: Is OZIUM economical in use?

A: Very much so. The No. 500 Ozium dispenser releases 500 or more individually *measured* sprays—thus, specific spray dosage is dispensed and wastage eliminated.

Q: Where should OZIUM be used?

A: Wherever air sanitizing is necessary, and especially where it is desired to effectively remove medicinal and body odors as well as those emanating from burns, cancer, colostomies and gangrene.

Q: Where do we buy OZIUM?

A: Your supply dealer probably has stocks. If not, he can obtain them promptly from us. Professional OZIUM is not sold through retail stores.

Q: What do medical authorities say about OZIUM?

A: "We find OZIUM very beneficial for reducing airborne bacteria and removing bothersome odors . . . we use it throughout our buildings."
