MEMORANDUM FOR all crewmembers

SUBJECT: Improper storage of aircraft tie-down tension adjusters.

1. Recently some individuals have been stowing aircraft tie-down tension adjusters improperly during times the aircraft is absent on a flight. These individuals have been placing the adjusters vertically into the hole in which the chain and adjuster assembly connects to the pad tie-down ring.
2. These chain adjusters, sticking up in the vertical position, present a real threat to hovering aircraft. They are an obstacle that could create a pivot point and cause a dynamic rollover accident with one of our aircraft.
