RAUCH HAND OPS in SEA 1967-1971

However, one outgrowth of the United States' involvement in the Vietnam War, Project Corona Harvest, continued into the post-war years. This project was conceived in 1966 to evaluate the use of airpower in Southeast Asia. In March 1970, the Air Force assigned responsibility for the overall conduct of the project to the AU commander. Using AU resources, he established a Corona Harvest project officer at Maxwell and involved the AU schools and other activities as deeply as possible in the effort. The result was the publication of numerous studies and a large number of highly condensed reports on specific lessons learned in Southeast Asia from 1965 to 1968. Phased out in October 1975, Project Corona Harvest was the most ambitious effort ever undertaken by Air University to study and develop lessons learned from a conflict in progress.

Project CHECO (Contemporary Historical Examination of Current Operations) was a United States Air Force initiative to collect and document Air Force experiences in the war in Southeast Asia. Begun in 1962, Project CHECO produced a series of classified reports on various phases of the air campaign. Many of these reports have been
