Dear Mike,   25 October 1986

        Here is the list of items I donated to the VHPA and sent to
Roger Gould.

        Kaypro II computer
        Smith Corona TP-1 printer
        Printer Cable
        4 print wheels for the TP-1 printer
        5 ribbons for the TP-1 printer
        Signalman Mark XII 1200 baud modem with cable connection
        Suprterm communications software
        1 set master software disks
        1 set working software disks (11 disks)
        1 set public domain software disks (11 disks)
        1 set blank disks (10 disks)
        Book "CP/M for the Kaypro with intro to dBASE II"
        Several magazines and other publications

        I hope Roger is enjoying all these goodies. I really have
enjoyed the newsletter that Roger does and hope this equipment
and software helps out.

        I am making steady progress on the dead data base using
dBASE III. I also plan to transfer a copy back to PC-FILE after
all the information I have is loaded. I would like to get a lot
more information on how people got killed. Any ideas about how
to get that? I am using "The Wall" directory as the authority on
dates when dates do not match up, if you know of any other source
that may be more reliable I would like to know.

        For your information I may be moving out of the country
again the first of next year, so you may want to consider a
back-up for me. As I promised I will not leave you short
for the next directory and may even be able to continue
while overseas. I will let you know.

        I will include a copy of one record so you can get an idea
of what I am doing.

                        Best Regards,

                        Gary
