## Support unit 'fights' battle of nuts, bolts

CU CHI—Often in a war where combat troops are in constant contact with the enemy, the support units "in the rear" who keep the fighting men supplied with the best available equipment are often forgotten.

Ground troops are supported by logistics, artillery and air operations. Each of these supporting units draws its strength from additional support elements.

One of these "behind the action" groups is Co. E, 725th Maintenance Bn., 25th Infantry Division. The company provides maintenance support for the helicopter aircraft of the division.

Its job is to keep the helicopters in top flying condition. From the smallest vibration adjustment to major body work, engine repair and armament control, Co. E is responsible for all maintenance functions.

Field maintenance on 85 aircraft is the primary task of the company. The helicopters come from Co. A and Co. B, 25th Avn. Bn.; D Troop, 3rd Squadron, 4th Cav., division artillery and the three infantry brigades of the division.

Units such as Co. E maintain the support that enable the ground troops to have the often-needed help for successfully defeating the enemy.

For the men of the division-level support unit, the hours are long and often tedious. But without the aid offered by such units, aircraft would not continue to fly in support of ground actions.
