Colorlab HD rates, unsupervised best-lite transfers
Client format is HD QT ProRes HQ, 1080p 23.98 with Pillarbox framing,
output to hard drive formatted for MAC.

Estimate includes HDCAM-SR intermediate tape copies of 4 "P" film items,
and Digibeta intermediate tape copy of 1 "P" SD videotape item,
that are required for NARA's own collection.

Per NARA, all "P" items are transferred at 1:1 film frames to video frames,
with Pillarbox framing & 4:2:2 color space, without electronic dirt filtration-
this means client's own HD file copies of "P" items will share these specs.
