Freedom of Information Officer
National Institutes of Health
9000 Rockville Pike
Bethesda, MD 20205

Dear Sir/Madam:

CANAH presents this request for information under the Freedom of Information Act, 5 USC 552, and we would like to employ the fee waiver clause since the Freedom of Information Act provides for a waiver of fees on the grounds that "furnishing the information can be considered as primarily benefitting the general public."

CANAH is providing information regarding this issue to Congress, State and Federal Agencies, and the general public. We, therefore, request the following information:

1. Cases of leukemias and lymphomas in children under 18, by age, year by year, since 1950 to 1987.
2. The whereabouts and condition of health of two cohorts nominated in your monograph #29, 1968, "Cell Cultures for Virus Vaccine production"
 - a) the one discussed on pages 453-455, Monograph #29;
 - b) the one discussed on pages 457-461, Monograph #29.
3. Basis for the selection of a State by State method to evaluate cancer deaths in these cohorts, instead of a direct followup person by person.
4. All statistical values-data used in preparation of these papers, particularly of the last two lines of the Summary:
"The first application, which concerned 6939 children immunized against measles in 1961, showed that no cancer death had occurred through 1964"
5. The final conclusion of the study involving yellow-fever vaccine in veterans inoculated since July 1942, and any efforts to properly notify these individuals of the risk they were running.
6. The rationale of using adenovirus vaccines already discontinued in civilians as early as 1962 because of cancer dangers, in military populations at a later date (see #7).
7. Name and whereabouts of the 600,000-servicemen inoculated with adenovirus vaccines in 1965-67, as well as those of the servicemen previously inoculated in Fort Dix. Also, specifically, names and addresses of the six volunteers inoculated with live adenovirus vaccine in the "experiment" described by Dr. Hilleman in Monograph #29.

8. The rationale of not searching for the presence of SV40 genomes in all victims of AIDS and ARC.
9. The efforts that were made to inform the veterans who received potentially oncogenic viruses of the risks they faced.
10. All research that you have available of interactions between "Agent Orange", AIDS, SV40 and Adenoviruses.
11. All research "proving" that HIV is the cause of AIDS.
12. All research confirming or denying the presence of heavy metals such as mercury, lead, etc. in the "Agent Orange" victims.
13. All studies of parasitic agents in the AIDS patients who were in Viet-Nam veterans.
14. All studies correlating inductees vaccinated with potentially oncogenic vaccines, clinical AIDS, and homosexuality.
15. All vaccines that were approved without an IND application because of emergency situations.
16. The rationale in the variable emphasis on SV40 safety testing in the CFR, Ch. 1, which refer to Poliovirus Vaccine Inactivated, Poliovirus Vaccine Live Oral, Measles Live and Smallpox.
17. The rationale in not testing Smallpox for viruses such as adenoviruses and other that frequently exist in cattle.
18. The standards and dates of initiation and termination of production of adenovirus vaccines, such as were used in Fort Dix.
19. The reason the Associated Press will withhold information previously published in the London Times at Dr. Robert Gallo's bidding.
20. The results obtained by the \$1.8 million given to Merck, Sharp and Dohme in 1972 to investigate a potential anti-cancer vaccine.
Also, the rationale for such an investment when such a virus had not been identified.
21. Every grant given by the National Institutes of Health since its inception.
22. All communications between the National Cancer Institute and the State Boards of Medical Examiners of all 50 states about any M.D. who is involved in alternate cancer therapies.
23. All communications between the National Cancer Institute and the Journal "Proceedings of the National Academy of Sciences", in reference to the article "Trans-activation of the human immunodeficiency virus long terminal repeat sequence by DNA viruses", by Howard E. Gendelman et al, which appeared in the December 1986 issue.
24. Any patents applied for by the National Cancer Institute and, or its outstanding officers in reference to any drugs and/or immunizations.
25. A list of the principal officers of the NCI, year by year.
26. Any communications with Rep. Claude Pepper or Victor Herbert, MD, JD or the National Council Against Health Fraud, Inc. at the University of Loma Linda, California.
27. Any studies performed to evaluate antihuman and antiprimate antibodies, as well as anti-egg protein and other antibodies after inoculation with the various immunizations and tissue cultures discussed in your monograph #29.
28. The rationale for obtaining permission to manufacture immunizations when in your monograph #29 you state that it is impossible to ensure total absence of adventitious viruses in vaccines.
29. Dates of Patent Applications for any ELISA, Western Blot or Immunizations dealing with the HIV virus.
30. Copies of any IND applications for any ELISA, Western Blot or Immunizations dealing with the HIV virus.
31. The studies showing that the methods you list as "unproven" for cancer therapy, which you

supplied to the National Council Against Health Fraud (Loma Linda) are definitely unproven other than in the opinion of your organization.

32. The correlation of the presence of Adenovirus and PARA virus in cases of AIDS.

33. The correlation between protein patterns in Waldenstrom's macroglobulinemia, multiple myeloma and other immune and "genetic" disorders, and protein patterns in AIDS and ARC, and the association between these and those created by SV40 and PARA viruses in experimental animals.

34. All studies proving that chelation therapy, DMSO therapy, and therapies with NNFF and MM are not effective in the treatment of AIDS patients.

36. Chromosome studies in the gay population suffering from AIDS for abnormal X and Y chromosomes, Ph chromosomes and other abnormalities of this type.

If any of the information requested is exempted from release, please send those portions which are reasonably segregatable and please provide an Indexing, itemization and detailed justification concerning the information which you would not be permitted to release at this time.

Thank you very much for your kind cooperation.

Sincerely,

C A N A H

Catherine J. Frompovich, Ph.D.
President & Legislative Advocate

ko

P.S.

If there are any monetary fee charges involved with regard to this request, please let us know in writing the total amount necessary to procure all the above information before sending the same along without our knowledge of the charges involved.
