is to know the value of the function at the point x and the value of the function at the point $x + \Delta x$. The value of the function at the point $x + \Delta x$ is given by the function $f(x + \Delta x)$. The value of the function at the point x is given by the function $f(x)$. The difference between the two values is given by the function $f(x + \Delta x) - f(x)$. The function $f(x + \Delta x) - f(x)$ is called the difference of the function f at the points x and $x + \Delta x$. The function $f(x + \Delta x) - f(x)$ is also called the increment of the function f at the point x . The function $f(x + \Delta x) - f(x)$ is also called the change in the function f at the point x . The function $f(x + \Delta x) - f(x)$ is also called the variation of the function f at the point x .
