1. <i>Chlorophyll fluorescence (Fv/Fm) was measured in leaves of 100 plants, 40 °C for 10 days.</i>	3. <i>Leaf area, chlorophyll content (Chl a+b) and total phenolics were determined.</i>	87
2. <i>Plants in the control group were subjected to the same treatment as the plants in the other groups. Temperature was 40 °C for 10 days.</i>	4. <i>The effect of salinity on the chlorophyll content, leaf area and total phenolics was determined.</i>	

1. *Chlorophyll* is the green pigment in plants that captures light energy and converts it into chemical energy through the process of photosynthesis.

[illegible]
